The Land Cover Map is based on the interpretation of a classified Landsat Thematic Mapper (TM) satellite imagery of Afghanistan. The interpretation was conducted using a supervised classification method. The Land Cover Classification System is based on a three-level hierarchy: Natural Vegetation, Human Vegetation, and Non-Vegetation. The map provides information on various land cover types including forests, shrubs, croplands, and barren areas. The data was compiled by stereo photogrammetric methods and the coverage of each map is derived through topographic base used for this map is derived from National Aerial Photography 1:50,000 scale topographic maps acquired through satellite imagery from Landsat Thematic Mapper (TM) satellite imagery of Afghanistan.

Date: April 2002
